

# *HOW TUTORING INDIAN STUDENTS IN VEDIC MATH CAN HELP THEM OVERCOME EFFECTS OF WESTERNIZATION*

The Instructor's Cultural Journey

EXPLORING NATURAL INTELLIGENCE

BEFORE VEDIC LEARNING

**Lost meaning  
to life**

AFTER VEDIC LEARNING

**A new sense  
of self-worth**

**EVER SINCE, UDHAYA  
HAS:**

- Learned to accept life as it is
- Not been broken again by newer attacks made by western imperialism
- Proudly upheld his values from Vedic learnings
- Enjoyed working on ways to reconcile Indian culture with the West

Though being born and brought up outside India for the most part of his life, Udhaya, learned Indian arts such as Bharatanatyam and Carnatic music, first from his mom and then later under renowned artists. He then graduated in Bharatanatyam in 2001 and gave several stage performances on TV, Cultural Conferences and Temples. Despite this, he found a way to reconcile with western arts and culture. But Western Imperialism was unable to accept him and sought every way to destroy him as a person, primarily through western influenced Indians.

## THE CHALLENGE

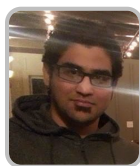

### The destructive cycle of psychological damage

Most Indians abroad feel the pressure to assimilate into western culture and in the process they fall into identity issues and low self-esteem.

In India, too, there exists many institutions that promote western imperialism and ideals, quite enough to make many of its citizens worship the west more than its own culture and heritage.

In fact, economic incentives are given to those who promote cultural imperialism and western ideals. This had lead to genocidal behaviors of most such individuals.

To be able to pass on my Vedic learnings to Indians and others all across the globe, I found Vedic Math to be the best way to start.

**UDHAYA RAVISHANKAR**

AI Engineer, 38 years old

# The Solution

## Vedic learning

Vedic learning is by far the most difficult task ever as it requires your mind to make a multitude of connections within, about the deities and how they relate to the sciences and nature.

However, after much perseverance, he was able to get anointed with the capability reading Vedic scriptures like a novel. This helped him understand Vedic ideals better, and a new sense of pride and confidence grew in him that helped him overcome the evil crafts of western imperialism.

He says, "To be able to pass on my Vedic learnings to Indians and others all across the globe, I found Vedic Math to be the best way to start". "This is because it provides some form of tangibility to the whole learning process", he went further on. Hence, his Vedic Math Philosophy program is designed specifically to help math tutors earn the Vedic learning aspects of their lives so that they can overcome the same challenges themselves as well as groom their students the same way.

# The Results

## Grooming the new generation

Through my program, Vedic Math tutors will be given all material to develop lesson plans for their students to **excel in their math school curriculum**, as well as help them overcome:

- **Pressure to Assimilate:** By learning traditional Indian mathematical and philosophical principles in their right senses, students will attain a new sense of self-confidence that will help them counteract the pressure to assimilate into Western academic norms.
- **Academic Stress:** Learning easy ways to tackle difficult math problems, through Vedic principles, will help them excel in other subjects, because the same principles are applicable elsewhere.
- **Low Self-Esteem:** With a rejuvenated sense of self-confidence, students will gain the ability to reconcile with Western and other cultures, and become less genocidal.
